Richborough Energy Park's 100MW/100MWh battery will boost the capacity and flexibility of the network, helping balance the system by soaking up surplus clean electricity and discharging it back when the grid needs it - with a capability to power 250,000 homes for an hour.

The Superhubs are designed to help Pivot and EDF Renewables UK deliver up to 2GW of transmission-connected battery storage and high-volume power connections to support more renewables and create the power infrastructure for mass-scale, rapid EV charging.

This project is part of EnBW's strategy to integrate battery storage systems with other forms of power generation such as pumped storage plants and hydrogen-capable gas-fired power plants, to create a more reliable and flexible power supply.

It will be the first such site to be directly connected to the transmission network by SSE's new solar and battery division. The battery order was booked in April 2022, and the system is expected to be operational by September 2023.
