

Anti-theft window solar panels

How can I prevent theft from my solar panels?

To prevent theft from your solar panels, connecting them to your alarm system is a great way as the alarm will go off if anyone starts tampering with them. Installing cameras that record the area where your panels are located is another effective measure. Using links to hold your panels together also makes them harder to steal.

How does the anti-theft security system work?

The anti-theft security system works as a loop: the plastic-insulated optical fiber is attached to the solar panels and strung together in a circle. The optical fiber is connected directly to a controller that detects the cutting of the fiber.

How to protect solar panels from criminals?

To protect solar panels from criminals, you can use extra fencing or electric fencing to add effort and scare off potential thieves. Additionally, using special anti-theft clamps and locks to secure the solar panels to the roof surface requires special keys that criminals do not have.

Are solar PV projects causing theft and vandalism?

The capital costs of solar PV projects can be enormous, running up into millions of dollars and with parks taking years to realise. Given this, developers want to make the most out of their investment but an increasing practice is threatening this return: theft and vandalism of solar technology.

Are solar panels stolen?

The theft of solar panels is becoming more of a regular occurrence worldwide, with people losing tens of thousands in equipment. Solar panels are valuable, and anything valuable within our society can be a target for thieves.

Did thieves steal solar panels & inverters from a rooftop installation?

Only last year did thieves steal around £50,000 worth of solar panels and inverters from a rooftop installation in Lincolnshire. A complete rooftop installation was stolen, leaving just one panel hanging from the property. To put that into perspective, that's two tonnes of panels that were stolen.
