

How does Belgium trade electricity?

Short term trading is done via the Belpex energy exchange, which is now part of APX-ENDEX. The Belgian transmission grid, operated by Elia System Operator, has a central position in the Synchronous grid of Continental Europe. This allows Belgium to trade electricity with its neighbours.

Why is Belgium a good country for electricity?

Belgium's electricity network is well-connected with its neighboring countries, which include France, the Netherlands, Germany, and Luxembourg. This interconnectivity is a key aspect of the country's energy strategy. Through these connections, Belgium is able to import and export electricity, ensuring a more efficient and stable electricity supply.

What is Belgium's energy policy?

Belgium, a key player in the European electricity landscape, relies on a diverse mix of energy sources to meet its electricity needs. The country's energy sector is characterized by a balanced approach, combining renewable and conventional energy sources.

How many offshore wind farms are there in Belgium?

There are seven large-scale offshore wind farm projects. Northwind (216 MW), Thorntonbank Wind Farm (325 MW), Belwind Wind Farm (330 MW) are operational. The others are in various stages of planning. The exploitation of Solar power is on the rise in Belgium.

Why are air conditioning prices rising in Belgium?

High temperatures of over 30°C are again forecast for next week on mainland Europe, which bodes for an increased use of air conditioning. As prices rise in France and Germany, electricity is being massively exported, pushing prices up in Belgium.
