Armenia has a great potential for solar energy--the average annual value of the flow of solar energy on a 1m² horizontal surface is 1,720 kWh/m², and a quarter of the territory of the country is ...

This raises the need to generate solutions for reducing reliance on energy imports. The dependence on external energy sources is partly mitigated in Armenia through the generation of nuclear power, but this source of energy cannot be considered as completely independent of external factors, as nuclear fuel has to be imported.
