You can use them as very space efficient storage for static power grids (at least in experimental) to the point where one of them I probably enough for basically anything you want to do as long as you have a few solar panels (which are much easier to get now if you check the roofs of certain buildings)

You could probably make a 1 frame vehicle with foot pedals, a bike alternator, controls, a saddle and a battery, then jumper cable the battery to another vehicle's battery to charge it. It would probably be a smaller overall time investment to build a foldable telescopic crane and yank a car alternator, tank, engine, battery, controls, and a ...

Well, the battery is still not charging... I made sure the alternator is on the same frame as the engine, and the battery on another frame. Added a second battery on a 3rd frame after the 1st one went down to 0, same problem for the new battery... Alternator and batteries are green, not the engine, but not faulty.

Yeah, a storage battery weighs over 300 pounds, so it's tough for the average character to lift without assistance. You need one of the following: - An NPC friend (preferably average or higher strength) - a telescopic crane vehicle (telescopic crane attached to a frame will do). Telescopic cantilevers can't be crafted, iirc

Foot pedals turn your character's STR stat into vehicle power. Truck alternators use a lot of vehicle power to generate charge. Every alternator has a minimum vehicle power it requires in order to generate charge, and if the vehicle lacks enough power to work its alternator(s), the engine won't run at all.

As far as the foot crank method goes, you can add an alternator to a bicycle or wheelchair, and add a battery, this allows you to charge batteries via pedal power. The foot crank has enough power to power a truck alternator. The best thing is, all you need is the frame, the footcrank, the alternator and the battery, a seat, and controls.

Christmas Island is an easy destination to visit, but planning ahead will help you get the most out of your time here. The first thing to decide is when you're going to visit - perhaps you'd like to observe the annual red crab migration or dive with visiting whale sharks?. Getting to the park is easy thanks to regular flights from Perth, Jakarta and Kuala Lumpur.
