

What are coloured solar panels?

With this in mind, more companies are considering the design of their panels and this has led to the introduction of coloured solar panels. Designed to blend in with the colour of your roof (or stand out in some cases) the panels function in the same way as traditional modules but are a more aesthetically pleasing alternative.

Are coloured solar panels expensive?

Yes, coloured solar panels can vary in price but are a more costly option than standard black or blue panels. The cost is also dependant on the type of colour you choose, with single colour options being cheaper than the multiple and marbled colour designs.

Are coloured solar panels popular in the UK?

This means browns, reds and greys are a popular choice although more vibrant colours like pink and green also exist in the market. Whilst coloured solar panels are not widely encountered in the UK yet, they have taken off in America and parts of Europe where coloured roof tiles are more commonly seen. Do coloured solar panels cost more?

Are coloured solar panels better than standard solar panels?

But regardless of the colour of your solar panels, the difference in efficiency between standard panels and coloured panels is not overly large. According to YouGen, coloured solar panels will generally only produce 20-40W less energy than a black or blue panel - dropping from 265W for a standard panel to 230W-245W for a coloured version.

Why do solar panels come in different colours?

The main reason for using different colour solar panels is to make an installation blend with the roof it is mounted on. This means browns, reds and greys are a popular choice although more vibrant colours like pink and green also exist in the market.

How much energy does a coloured solar panel produce?

According to YouGen, coloured solar panels will generally only produce 20-40W less energy than a black or blue panel - dropping from 265W for a standard panel to 230W-245W for a coloured version. This is great news for anyone wanting to opt for coloured panels as they still generate a good amount of energy in comparison.
