

Swiss cloud storage solutions: Infomaniak K Drive Solo: 2 TB: CHF 5.39 : Proton Drive Plus: 200 GB * CHF 4.99 : Proton Unlimited: 500 GB * CHF 12.99: ... Backing up all your data on an external hard drive or other storage device as well as on the cloud adds another layer of security. A good security concept is to store your data both in the ...

The Value of Software Only HA and DR. ... He is the primary contributor to Storage Switzerland and is a heavily sought-after public speaker. With over 30 years of experience designing storage solutions for data centers across the US, he has seen the birth of such technologies as RAID, NAS, SAN, Virtualization, Cloud, and Enterprise Flash. ...

Covering Both Ends of DR Posted on September 14, 2017 by George Crump One of the lessons IT is learning from Hurricanes Harvey and Irma is there are some situations where the organization really does not need to meet, or even come close to meeting the strict recovery point and recovery times it establishes.

The storage price check doesn't look at current storage prices because vendors won't share them. IT professionals almost universally agree that storage systems cost more than they should. As a result, the storage price check looks at what causes storage prices to be so high. Storage Price Check - Lack of Transparency Increases Prices

Excelero's NVMesh architecture pools local NVMe storage resources across any storage networking, including Ethernet or InfiniBand. This frees available storage capacity from being bound to individual servers, and as a result improves capacity utilization. Excelero's Remote Direct Drive Access (RDDA) driver then intelligently creates logical virtual volumes of ...

While backups are a critical component of data protection and are perceived as a cost-effective way to ensure data availability, backup alone are not DR. Relying solely on backups for disaster recovery (DR) introduces significant risks and ...

The problem is the earliest form of media protection was mirroring, which makes a real-time copy of data on a separate drive, known as RAID 1. Mirroring brings a high level of redundancy at a high cost, an effective doubling of capacity requirements. ... He is the primary contributor to Storage Switzerland and is a heavily sought-after public ...

Software defined storage (SDS) promises to reduce storage capital and operational costs by abstracting data services from the storage hardware. To deliver on these promises, SDS typically enables the use of ...

The number one reason that actual DR attempt fails is due to lack of familiarity with the process. DRaaS

allows DR testing to move from a once or twice a year event to an ongoing task since the DR process is initiated in the cloud and can be quarantined from actual production. Small Disaster Recovery

When I joined the IT industry in 1993, backup and DR used the same storage target: tape. You backed up your data center to tape every day, you put those tapes in a case, and your off-site vaulting company picked them up and took them away. Best practices were to have a tape copy on-site and off-site; on-site tapes were used for day-to-day ...

MSD Dry Storage Cabinet. iF1/F11% RH NetMonitor Dry Cabinet/Dry Cabinet; X2B5% RH Dry Cabinet; iX2B <5% RH NetMonitor Dry Cabinet; A1B 1~50% RH Dry Cabinet; XC/ADC 3D Printing Filament Dry Cabinet; GB Glove Dry Box ; SensorLook Monitoring System; Baking Dry Cabinets. TA Baking Dry Cabinet. T50A; T70A; Smart Nitrogen Cabinet

To those controllers the device looks like another hard drive. Unlike most PCIe SSDs that require an operating system-level driver an SSD DIMM will work in any platform that has a SATA controller. ... Before founding Storage Switzerland, he was CTO at one of the nation's largest storage integrators, where he was in charge of technology testing ...

A drive of this size in a RAID set is going to take a very, very long time to rebuild. A RAID5/6 rebuild has been estimated to take anywhere from 1 week to 3 weeks per drive. Storage Switzerland has predicted the death of RAID as a protection scheme for years, high capacity 8TB/10TB drives may just put the final nail in that coffin.

The difficulty increases as IT gets deeper into the DR recovery process. Orchestration makes deep prioritization easy. ... He is the primary contributor to Storage Switzerland and is a heavily sought-after public speaker. With over 30 years of experience designing storage solutions for data centers across the US, he has seen the birth of such ...

RackWare doesn't see the cloud as another silo or a replacement of a company's local environment, per se, but as an additional resource that enables them to do more with their existing infrastructures. The product is a management solution that lets an enterprise "cloudify" local servers, building a bridge to the cloud and making it...

We develop and manufacture different kinds of Dr. Storage dry boxes, Baking dry cabinets and Dr. Sensor alarm hygrometer, centralized monitoring system...etc. Our total dedication to humidity management means that we can now offer an integrated solution that complies with J-STD-033D standard. Our pre-eminence in successfully helping thousands ...
