The costs of installing new storage heaters. Like installing new electric radiators, the cost of modern storage heaters can vary significantly. As a general rule, expect to pay anywhere from £100 to £700 per unit for modern storage heaters. High-end models offer advanced features like automatic temperature sensors and smartphone controls.

When charging heat, a small electric storage heater may consume about 1kW, while larger models might use nearer 3kW. That's a lot of electricity - but remember it's the maximum amount of power it'll use. And some storage heaters stop using energy when they've stored enough heat. So this figure is just a guide. Running costs

You control when the storage heater releases heat during the day. It's important to make sure your storage heater is set up correctly so you don't pay more for electricity than you need to. If you have storage heaters, it's likely you'll have an electric immersion heater to heat your water. You'll need to set this up correctly as well.
