

What is a grid control in Genexus?

The Grid control displays data associated with many records. In some cases, it also allows entering, updating, and deleting data. You can include a Grid control in GeneXus objects with UI (User Interface/screen). The Grid control has different capabilities depending on the object in which it is located. It is important to understand them.

Does Genexus automatically load a grid?

Yes: Grids load automatically. This is the default value. GeneXus performs an automatic pagination if the Rows property of the grid has a value other than zero. The buttons inserted depend on the number of records to be shown and the number of lines of the grid.

What is a condition property in Genexus?

This property applies to the individual control for which it is defined. It must not be confused with the Conditions tab of the GeneXus object (whose aim is to apply filters to the whole object: form, all the Grids, etc.). This property applies only at design time. Consider a Knowledge Base containing the following Transaction object s:

How do I add a grid in Genexus?

There are different ways to add a Grid: Drag the Grid icon from the Toolbox to the desired location on the Web Layout of the Web Panel /Layout of the Panel. Select Insert > Grid from the GeneXus main menu. Next, a Selector window will be opened to select which attributes/variables you want to include in the Grid.

What is a condition attribute in Genexus?

Attributes must belong to the Extended Table of the Base Table where the condition is applied. This property applies to the individual control for which it is defined. It must not be confused with the Conditions tab of the GeneXus object (whose aim is to apply filters to the whole object: form, all the Grids, etc.).

Can I remove a grid from a two-level transaction in Genexus?

When you have a two-level Transaction in GeneXus, you are saying that the data in that transaction must be managed as a whole. That's why GeneXus won't let you remove the second level's grid from the Form. What you need to do, if you want to manage the two levels separately, is to have two different transactions, one for each level.

GeneXus ?????????????????? WHEN ?????????????? (????????) ?????????????? ?????????????? ...

When the generator does not support conditional constraints. When the condition cannot be evaluated by the DBMS. For instance, the conditional attribute is a formula, that calls an UDP or refers a function that can not be evaluated by the DBMS. In this case; if there is a formula attribute used in the grid conditions; the LastPage

paging button does not work ...

Ordenes, searches y condiciones sobre los datos mostrados. V&#225;lido para: Evolution 3. Dado un Panel o Work With for Smart Devices, &#191;c&#243;mo especificamos por qu&#233; criterio o criterios queremos ordenar la informaci&#243;n a desplegar en un grid? &#191;C&#243;mo especificamos criterios de b&#250;squeda, filtros avanzados y otras condiciones?

When there is more than one grid, the Load command alone can only be written within the Load event of the grid in question. And to load a line in one of the grids from a user event, you will ...

Filter the records that will be loaded in the Grid control. Description. Conditions can be applied individually, per each Grid, or generally, for the object. ... GeneXus has to determine to which For Each commands the general conditions are applied, to do this GeneXus examines all For Each commands and applies the general conditions to those of ...

Assunto: RE: [gx-l] Cargar grid con conditions Gracias por responder. El tema pasa porque al hacer manual la carga demora mucho ya que son varios miles de registros y necesito paginar de a 10 registros, y gx lo resuelve mucho mejor ya que si lo hago con variables en el grid, primero lee todo y luego muestra.

This property is offered for Grid controls and Free Style Grid controls in Web Panel objects. It allows indicating the order in which the query must be returned. It is equivalent to writing the Order clause in the For Each command .

For usability and performance reasons, it is convenient to display grid results in a fixed-size grid and provide buttons to browse the pages (Grid paging). Paging applies to Grids and Free Style Grids, as well as to nested grids. Paging can be automatic or manual, when the grid Rows property has a value other than zero.

grid. The generic Refresh command (that we had seen) causes the generic Refresh, and Refresh and Load of each grid (i.e. everything but Start) to be executed. And now we also have the Refresh method of a grid, which will refresh only the grid; that is to say, run the grid Refresh and Load (once or n times,

Data shown in the form is loaded from the database into the grid. Syntax. Event `grid_control.Refresh event_code EndEvent`. Where: `grid_control` Name of the grid control. `event_code` Code associated with the event. Example. A Web Panel object or a Panel object displays Customer Invoices for a certain date range. The conditions are:

When you have a two-level Transaction in GeneXus, you are saying that the data in that transaction must be managed as a whole. That's why GeneXus won't let you remove the second level's grid from the Form. What you need to do, if you want to manage the two levels separately, is to have two different transactions, one for each level.
