

Who is Danish Energy Management?

Danish Energy Management (DEM) is a leading consultancy in Sustainable Energy, Climate & Environment and Digital Technologies. We provide engineering, technical consulting and Monitoring & Evaluation services to public and private clients.

What is smart energy Denmark?

Smart energy Denmark. A consistent and detailed strategy for a fully decarbonized society- ScienceDirect
Smart energy Denmark. A consistent and detailed strategy for a fully decarbonized society A strategy for a fully decarbonized Danish society in 2045. The inclusion of international shipping and aviation in a country strategy.

What is smart energy Denmark 2045?

The making of Smart Energy Denmark 2045 was based on a similar but more limited working process involving experts in different technical areas in a back-and-forth dialogue with energy systems modelling of the role of individual technologies into an overall solution.

Should biomass emissions be included in Smart Energy Denmark 2045?

Biomass emissions are part of the LULUCF sector, i.e., Land Use, Land Use Change and Forestry. In the Smart Energy Denmark 2045 scenario, not only domestic transport should be included. To achieve a fully decarbonized society, Denmark would have to include the Danish share of international shipping and aviation.

Smart home technology (SHT) is increasingly entering homes to provide services such as energy management, security, comfort, and convenience. However, research shows that adoption varies across social groups and that SHT might affect energy demand.

This paper presents a strategy for achieving a fully decarbonized Danish energy system (including transport and industry) in 2045. The strategy could also be relevant for most countries at a global level.

IQ Energy Nordic are a Denmark based provider of energy saving and monitoring services and technology. We specialise in harnessing the power of Big Data, AI and IoT to help clients optimise their portfolios and maximise asset value.

Smart Home Energy Management System (SHEMS) requires development of a framework to handle the energy needs, demands and resources of a home to reduce the energy costs without compromising the comfort levels of the user.

The main objective of this research project is to study and develop a set of decision support tools for the

deployment of HEMSs in Denmark that can bring the maximum value to home owners. This includes tools for the prediction of renewable energy sources generation and users' consumption, as well as control strategies for the different ...
