What is needed to install solar panels on UK homes?

Here's a quick guide to what's needed to install solar panels on UK homes: An installer should visit to determine if the property is suitable for solar panels. They will look at the size and orientation of the roof to decide the best location and angle for installing panels.

Can I install my own solar panels?

It is legal to install your own solar panels - but it's not a good idea, unless you're a certified solar installer. You'll need expertise in roofing and electrical work, as well as specialist equipment and - in most cases - scaffolding.

How do solar panels install?

Your installer will start by placing the solar panels onto the mounting system, without fully securing them just yet. Once they're happy with the angle of the panels, the installer will tighten all the bolts and nuts across the system to secure them in place.

How do you install PV panels on a house?

The most common method of installing domestic PV panels is mounting them to your rafters. This is done with custom hooks, aluminium mounting frames and specialist clamps. When a property is over one storey high, scaffolding is essential to gain roof access as the engineers need access to work on the roof.

Should you buy or rent a home with solar panels?

With 69% of people telling our National Home Energy Survey that they're likely to buy or rent a home with solar panels, now is a great time to go solar. And if you're ready to get solar panels on your roof, it's never been simpler to compare prices with our easy-to-navigate tool.

How does a solar panel installation work?

The installer will have to lift some of the roof tiles to fix the anchors to the rafters in the loft. This will give the solar panel mounts a stable foundation, and will make sure they don't get damaged in stormy weather. Once the roof anchors have been fixed to the property, the installer will attach the solar panel mounting system to them.
