

Lefeng generator broke down after 60 000 km

What are common generator problems?

Say goodbye to generator malfunctions - and the stress that comes with them. In this blog post, we'll break down common generator problems like faulty wiring, troublesome spark plugs, oil leaks, and fuel system failures. Get step-by-step instructions on how to fix them and gain insider tips from our local generator repair service experts.

Why is my generator not running?

Your generator was running fine, but now it shuts off and won't stay running. A generator starts and then dies due to an empty fuel tank, plugged fuel filter, dirty carburetor, clogged fuel line, bad gas cap, dirty spark plug, faulty ignition coil, low engine oil level, or old gas.

What causes a generator to breakdown?

Another common reason for generator breakdowns is poor fuel quality. Generators need clean, high-quality fuel to run properly, and dirty or contaminated fuel can cause engine problems or fuel system blockages. Using stale fuel or fuel that has been sitting in the tank for an extended period can also cause problems.

What causes a generator to die?

Other common reasons for a generator dying are fuel and airflow restrictions. Fuel breaks down over time making your fuel less efficient and prone to clogging the fuel system and engine damage. Drain the fuel tank and fill it with fresh fuel. Use a fuel additive like Sea Foam to stabilize the fuel and assist with cleaning the fuel system.

What happens if a generator runs out of fuel?

Combined with inaccurate fuel level gauges, running out of fuel is a relatively common issue for generators. Most generators have a "Low Fuel Level Shutdown", which prevents the unit from starting when fuel depletion is imminent.

What happens if a generator fails?

Over time, fuel can become contaminated or degraded, leading to engine malfunctions. Additionally, insufficient winterization can cause fuel lines to freeze and block, rendering the generator useless. Battery complications: A generator's battery is crucial for starting the engine. If it fails or loses charge, the generator won't function.

Make any necessary repairs. Add fresh gasoline to the fuel tank. (If your generator uses a 2-cycle engine, fill it with a fuel mix of gas and oil). 2. Bad or Old Fuel. Old gas is often the primary ...

This means that the generator will take far longer to cool down. [D] A broken-down fan. Just like your laptop,
