

Mei Family Solar Mounting

What is a Meiser modular system for PV mounting systems?

The MEISER modular systems for PV mounting systems are the ideal addition to our service portfolio. The Solar division completes the range of services offered by MEISER Straßenausstattung GmbH, which has been dedicated to the development, production, installation and world-wide distribution of a wide variety of restraint systems since 1984.

Where is Meiser solar made?

MEISER Solar develops and produces mounting systems for solar parks on any site and suitable for any terrain, whether this is agricultural land or an industrial site, former airfield, mining area, slag heap or former landfill. Our mounting systems are sustainably produced in our own steelworks in Germany and are fully recyclable.

What makes a Meiser solar mounting system special?

The MEISER Solar mounting system has a lightning protection certification. The continuous electrical connections between terminals, purlins, trusses and posts allow for potential equalization. Only high-quality stainless steel connectors manufactured in Germany are used. Trusses and purlin runners from strip-galvanized Magnelis® also add quality.

Why should you choose Meiser Solar frame systems?

All MEISER Solar frame systems can be set up with just two tools and can thus be mounted especially quickly and efficiently. The installation effort is reduced, the logistics on the construction site are easier to manage, and overall there is less room for errors.

What types of foundations can a Meiser Solar frame system be used for?

They are suitable for pile driven foundations, ballast foundations and concrete foundations and available in four versions. All MEISER Solar frame systems can be set up with just two tools and can thus be mounted especially quickly and efficiently.

What is a solar mounting G-type system?

The Solar Mounting G-Type system is designed for ground conditions that require a non-intrusive system. The G-Type system is ideal for projects where recycled aggregate can be utilised as ballast, offering a sustainable solution with enhanced durability and adaptability.

Shi Mei and her husband earn a decent enough living by growing corn and millet on their small farm in eastern China's Shandong province. In 2021, they diversified by investing in solar energy--signing a contract to ...
