

How is energy sourced in Paraguay?

Energy in Paraguay is primarily sourced from hydropower, with pivotal projects like the Itaipu Dam, one of the world's largest hydroelectric facilities. This reliance underscores the need for a robust infrastructure, including efficient transmission networks and distribution systems, to leverage the country's renewable resources fully.

How can Paraguay improve energy security?

These aspects are clearly highlighted in Paraguay's National Energy Policy 2016-2040 and, more recently, in concrete actions outlined in the Energy Agenda 2019-2023, which focuses on the key pillars for enhancing energy security through the use of renewables, encouraging renewable-powered electrification and promoting sustainable mobility.

Why is the energy sector important in Paraguay?

Paraguay's National Energy Policy 2016-2040 recognises the importance of the energy sector for economic growth by increasing the country's productivity and promoting sustainable development. The energy sector is a key contributor to human development (UNDP, 2020) and job creation.

What is Paraguay doing now?

Paraguay is currently co-chairing, pro tempore, the Steering Committee of the GCF Readiness Project on Advancing a Regional Approach to Electric Mobility in Latin America. The country is also preparing a Green Hydrogen Road Map, following the guidelines of the National Energy Policy and, more specifically, the Sustainable Energy agenda 2019-2023.

How does Paraguay's energy mix affect the environment?

In recent years, the share of fossil fuels in Paraguay's energy mix has grown. The country's increasing dependence on these fuels has resulted in rising greenhouse gas emissions from the energy sector, adversely affecting Paraguay's energy security and climate commitments.

What is the energy mix of Paraguay?

Tambi n disponible en Espa ol. The energy mix of the Republic of Paraguay is dominated by clean energy sources, where hydropower accounts for the largest share of the country's power generation, representing around 99.5% of the installed power capacity.
