

What are Mongolia's Energy goals?

The government of Mongolia has set targets to increase the share of generation capacity from renewable energy sources to 20% by 2023 and 30% by 2030, and to build export-oriented power plants.

What type of energy is used in Mongolia?

In Mongolia, total primary energy supplies continue to be dominated by coal, and electricity generation is largely provided by coal-fired power plants, particularly combined heat and power plants. In 2018, 93% of all electricity was produced by thermal power plants, and 98% of all district heat was provided by coal-fired systems.

Why does Mongolia import power from Russia and China?

Although Mongolia has abundant resources to produce electricity, it currently lacks sufficient generation capacity to meet its needs, and thus imports power from Russia and China. Power is imported across the northern border to compensate for shortfalls of electricity in the northern central area during winter peak periods.

In this Special Report, Oyunchimeg, Tuya, Zorigt, Sukhbaatar and Bayarkhuu provide an update on the current status and recent trends and challenges in Mongolia's energy sector, including ...

Rayvia Energy is an investment group which acquires operational assets within the renewable energy sector, with a primary focus on solar, wind, and hydropower stations across Africa. Our leadership team includes top-level executives from Siemens-Gamesa, GE Onshore Wind, Électricité De France, Samsung C& T, PwC, EY, Bitfarms and NEOM.

Our mission is to create and maximize investment opportunities in renewable energy across Turkey, the Middle East, and Africa, attracting both local and international investors. With Africa's electricity consumption rapidly growing and investment in the region waning, we place special emphasis and interest in stimulating investment growth in ...
