

How does a single phase generator work?

In a single-phase generator, the flow of electricity is directed through two wires (phase and neutral), with the power produced by a single voltage that continuously alternates. It is through this alternating or oscillating wave that power reaches its peak output and the maximum amount of power is generated.

What is a single pump single loop Generator?

Single Pump Single Loop (SPSL) - SPSL systems are common in smaller to mid-size generator applications. Operation for this system as follows: o Engine starts,direct drive pump is driven and fan clutch is rotating. o Engine reaches operating temperature,coolant thermostat opens and fan clutch engages.

What is the difference between a single phase and a three phase generator?

Whilst both phases are effective generators of electricity, their load distributions and power volumes are vastly different. Single phase power is generated when a single AC wave is used, with a three-phase generator providing three voltage sources from the same alternator.

What are the components of a generator cooling system?

Coolant System - Each generator application can have a different cooling system configuration. Below is a general list of components: o Coolant pump- Depending on engine size,belt or gear driven. Circulates coolant throughout cooling system. o Radiator - Can be single or twin radiator design.

What type of power does a generator produce?

Depending on the generator make and model that you choose,your generator may produce single phase or 3-phase power,with each phase providing power in different ways. Whilst both phases are effective generators of electricity,their load distributions and power volumes are vastly different.

What types of generators are available?

A wide selection of domestic /leisure &commercial grade generators. We have petrol,diesel &LPGmodels. Whether you need a generator that is lightweight and portable for camping,something more heavy duty to power or backup your business or standby power for your home,we will have the generator to suit your needs.
