

St Vincent and Grenadines microgrid definition

"Most of the islands in the Grenadines are fully dependent on fossil fuel including Mayreau, Canouan, Union Island--and the broader concept was to look at these islands and see how to make them renewable with solar, wind, and battery storage," said Ellsworth Dacon, Director of the St. Vincent and the Grenadines Energy Unit.

This document presents St. Vincent and the Grenadines' Energy Report Card (ERC) for 2021. The ERC provides an overview of the energy sector performance in St. Vincent and the Grenadines. The ERC also includes energy efficiency, technical assistance, workforce, training and capacity building information, subject to the availability of data.

The system, to be built on the island of Mayreau in the Grenadines, will produce enough energy to power the island for 6 to 10 hours per day. The microgrid will be designed to withstand the strongest Category V hurricanes, and will be instrumental in meeting national goals of greenhouse gas reduction and increase in renewable energy.
