

Where can I find information on energy access in Gambia?

Find relevant data on energy production, total primary energy supply, electricity consumption and CO2 emissions for Gambia on the IndexMundi Homepage. Find relevant information for Gambia on energy access (access to electricity, access to clean cooking, renewable energy and energy efficiency) on the Tracking SDG7 homepage.

Why is energy important in the Gambia?

The availability of adequate, reliable, affordable and sustainable energy is a critical milestone in the socio-economic development of any country. While less than half of all households in The Gambia have access to electricity, over 90% are still dependent on solid biomass for cooking and heating. This has intensified poverty.

Did Gambia import energy?

Gambia did not import energy. Energy sources, particularly fossil fuels, are often transformed into more useful or practical forms before being used. For example, crude oil is refined into many different kinds of fuels and products, while coal, oil and natural gas can be burned to generate electricity and heat.

Can the Gambia transform the energy sector?

An unprecedented level of support from the international community provides The Gambia with the opportunity to transform the energy sector and emerge as one of the leading energy sectors in the sub-region and the African continent. In this context, the Electricity Roadmap has undergone its third update since 2015.

How is electricity financed in the Gambia?

A large proportion of this is already financed through on-going national and regional projects sponsored by development partners. The Gambia is poised to provide access to electricity for all its people. His Excellency, President Adama Barrow has stipulated that there is to be Universal Access by 2025.

Is re a solution to energy problems in the Gambia?

Policy makers across Africa have been among the last to embrace Re as a solution to their energy problems. They are often locked into crisis management on a day-to-day basis. The country's policy makers need to be persuaded that Re has a real future in the energy mix of The Gambia. They need to demonstrate this by their actions.

The Gambia has parallel energy markets in traditional and modern energy fuels and carriers. The latter, with a market share of approximately 40%, is built around product supply and demand dynamics and price adjustments in petroleum and electricity subsectors. About 60% of fuel imported is used by the National Water and Electricity Company ...
