

The balcony locker can hold a hanging iron

How to hang a balcony from a building?

When it comes to the two corners of the balcony that are farthest from the building, you have three choices: You can hang the corners from the building with diagonal steel rods or cables, you can support the corners from below with diagonal wooden brackets, or you can support the corners on independent posts, like a conventional deck.

How do hung balconies work?

The "cantilever" is a beam anchored at one end to the support structure, extending outward to hold the balcony's weight. Hung balconies are supported by a system of stainless steel cables or rods, which are anchored to the building's structure and 'hang' the balcony in place.

What is a suspended balcony?

Suspended balconies are elevated structures that are typically supported by cables or rods, giving them the appearance of hanging or being suspended from the building's facade. Along with tensioned rods and cables, the suspended balcony is further structurally supported by a large plate, securing it at a perpendicular angle to the wall.

How do you support two corners of a balcony?

There are two possible ways of supporting the two corners of the balcony adjacent to the building: You can install a conventional deck ledger that is attached to the building, or you can support the corners on posts that bear on footings, like a freestanding deck.

Are gallow brackets good for balconies?

That's why gallow brackets are ideal for balconies, at least to some extent. Placing a triangular support bracket underneath a balcony, with one side flat against the balcony and the other tightly against the wall, will ensure that the balcony is supported and unlikely to collapse if it's constructed correctly.

How safe is a balcony?

In conclusion, the safety and integrity of a balcony depend on a well-designed support system and material choice that suits the local environment and the building's design. Regular maintenance, informed by the properties of the material and the type of support system, is key to the longevity and safety of the structure.
