

Can solar PV systems be installed on a pitched roof?

The guidelines also say that provision must be made for ventilation behind the solar PV modules to provide cooling. With the introduction of MCS012 in March 2012 we would now expect all MCS certified installers of solar PV systems to install solar PV systems on pitched roofs using only MCS012 certified roof fixings.

How do solar PV roof fixing systems work?

Get more information about solar PV roof fixing systems at the Ecofirst website. Solar PV tracking systems move the PV panels to track the sun, and are claimed to produce up to 30 per cent more electricity than a static array. The downside is the additional cost.

What is a roof mounted photovoltaic system guidance?

The guidance refers only to the mechanical installation of roof mounted integrated and stand-off photovoltaic systems; it provides best practice guidance on installation requirements and does not constitute fixing instructions.

Can a PV system be integrated into a flat roof?

In some cases, PV systems can be integrated directly into flat roofs (Figure 25), although this is not common because the efficiency of PV modules is reduced because the optimum angle relative to the sun is not achieved.

How should a PV system be designed & installed?

From the outset, the designer and installer of a PV system must consider the potential hazards carefully, and systematically devise methods to minimise the risks. This will include both mitigating potential hazards present during and after the installation phase.

Can a PV system be electrically installed?

Guidance exists for electrical installation of PV systems [15,16,17] but there is little equivalent guidance for mechanical installation.
